## INNOVATION WIRELESS INTRODUCES A COUNTDOWN TIMER TO THEIR WIRELESS SYNCHRONIZED TIMEKEEPING SOLUTIONS

**CULVER CITY, CA. – January 30, 2009** – Innovation Wireless, a leader in GPS synchronized wireless time systems, introduces a new Countdown Timer that provides reliable elapsed time – whether you want to ‘count up’ or ‘count down’. Powered by the Innovation Wireless **KRONOsync™** transmitter, the Countdown Timer functions as a Synchronized LED Digital clock when not in countdown/up mode.

The Countdown Timer is a perfect solution for hospitals, clinics and healthcare facilities during critical events. When a countdown status is initiated on the switch controller, a relay is sent to the Countdown Timer which triggers the timer to begin its count up or count down mode.

“Due to increasing healthcare regulations and processes, medical facilities are required to provide more accurate and detailed patient documentation. Our countdown timer provides hospitals a solution, along with our GPS/NTP synchronized clock system to standardize time throughout their facility,” explained Todd Hasson, President of Innovation Wireless.

The new countdown timer achieves precise GPS or NTP time, delivered by the Innovation Wireless **KRONOsync™** transmitter. The transmitter delivers a time signal, which is broadcast via a strong UHF frequency, to all timing devices within a facility, synchronizing them to the exact second. With GPS or NTP wireless technology, the clocks automatically adjust following Daylight Saving Time and power outages, which reduces healthcare facility labor and costs. Because the system is FCC-licensed and runs on a protected 467MHz frequency, concerns about interference with other equipment in your facility are also eliminated.

### Availability

For more information about fully synchronized timekeeping solutions from Innovation Wireless, please call 1-888-559-5565, email [sales@innovationwireless.com](mailto:sales@innovationwireless.com) or visit our website at [www.innovationwireless.com](http://www.innovationwireless.com).

## **About Innovation Wireless**

**Innovation Wireless**, headquartered in Culver City, CA, is a manufacturer and marketer of Wireless Synchronized Time Systems, with over 30 years of expertise as one of the world's largest designers and distributors of clocks, clock parts, and components. We have found that virtually all markets and applications require accurate, reliable, synchronized time.

The new generation of wireless timekeeping has greatly enhanced and simplified the way schools, hospitals, businesses and all organizations operate and manage time. **Innovation Wireless** has embraced the power of the Global Positioning System (GPS) and Network Time Protocol (NTP) technologies to successfully accomplish wireless, synchronized time. Our system is simple, easy to install and maintain, and guarantees precise synchronization of clocks throughout all types of facilities.

Our technology will enable you to achieve a synchronized environment at a fraction of the cost associated with maintaining existing failed or failing clock systems.

**Innovation Wireless** has brought new ideas and creativity to our wireless time systems. We will continue to monitor emerging industry developments, while maintaining ongoing engineering of innovative product technologies.
